

# MetWest Ultra Short Bond Fund

## Performance as of September 30, 2019

(%)	I Share	M Share	Index <sup>1</sup>
Latest Quarter	0.75	0.47	0.56
Year-To-Date	2.44	2.32	2.33
1 Year	3.30	3.13	3.13
3 Years	1.89	1.65	1.60
5 Years	1.38	1.17	1.12
10 Years	2.94	2.74	0.79
Since Inception	1.74	1.90	1.72; 1.66 <sup>2</sup>

Not annualized if less than one year.

Expense Ratio (%)	I Share	M Share
Gross	0.56	0.74
Net <sup>3</sup>	0.34	0.50

Annual fund operating expenses as stated in the Prospectus dated July 29, 2019.

Source: TCW

1 ICE BofAML 1-Year U.S. Treasury Index – An unmanaged index comprised of a single issue purchased at the beginning of the month and held for a full month. The issue selected at each month-end rebalancing is the outstanding two-year Treasury Bill that matures closest to, but not beyond, one year from the rebalancing date. The index is not available for direct investment; therefore its performance does not reflect a reduction for fees or expenses incurred in managing a portfolio. The securities in the index may be substantially different from those in the Fund.

2 The since inception return for the index reflects the inception date of the MetWest Class I and Class M Share Funds, respectively. For period 7/31/04 – 9/30/19; 6/30/03 – 9/30/19.

3 Expenses reflect a contractual agreement by the Adviser to reduce its fees and/or absorb certain expenses to limit the fund's total annual operating expenses until July 31, 2020, unless terminated earlier by the Board of Trustees. Performance would have been lower if fees had not been waived in various periods.

## Market Review: “What is it that you would like me to do, sir?”

Having foreshadowed a willingness to renew monetary accommodation as early as January of this year, perhaps the Fed could be lauded for holding off action until the third quarter against the withering criticism from the President and intermittently volatile markets. But capitulate it finally did, not once but twice, with an ease of 25 basis points in September to follow one in late July, which had marked its first cut since 2008. What was notable in the redirection of policy, as highlighted by the latest meeting minutes, was a lack of consensus versus the past, underscoring uncertainty (and dispersion of opinion) among the FOMC members. The broader viewpoints suggest increased risk of policy error, particularly in the face of unrelenting political pressure. However, it wasn't as if the more dovish faction was without support for its perspective: since the start of the year, trade tension and its fallout disaffected economic measurables in a meaningful way. As a result, global recessionary concerns mounted in the third quarter, particularly in Europe where the IHS Market Eurozone composite PMI, which captures both manufacturing and services activity, fell to 50.4 in September, the lowest reading since June 2013, and German manufacturing PMI fell to a 10-year low. Trade concerns have taken a toll on U.S. manufacturing as well, with the PMI here falling into contraction territory for the first time in three years. Not surprisingly, businesses remain skeptical of the prospective environment, as evidenced by sharp declines in survey-based measures of expectations, confidence, and spending decisions.

And if the policy challenge wasn't enough, “operational” issues surfaced late in the quarter as the NY Fed was spurred to intervene in lending markets during September to address significant stress in the overnight funding markets whereby repurchase rates spiked from 2% to 10% over the course of a week. The funding squeeze hypothetically owed to technical factors (corporate tax payments and Treasury auction settlements that reduced excess bank reserves held at the Fed, and thus reduced the cash available to lending in the repo market). For now, the dislocation does not suggest a broader liquidity crisis, though it highlights the post-global financial crisis regulatory environment in which dealers have limited ability to maintain order in the repo market, and counsels ongoing vigilance to downstream effects into other bank funding markets.

Despite the continuing late-cycle conditions characterizing the U.S. and global economy, with soaring debt and slowing growth, thus far, a strong consumer and accommodative Fed have kept the expansion going and asset prices up (mostly). This is reflected in the ongoing climb of equity markets this year notwithstanding periodic sell-offs, as the S&P 500 advanced 1.7% in the third quarter to notch a year-to-date return of nearly 21%. Fixed income markets, too, have posted impressive total returns, with the Bloomberg Barclays Aggregate Index up 2.3% for the quarter and 8.5% year-to-date. Investment grade corporate credit, in particular, has benefitted from the Fed's signals/actions and a global appetite for yield fed by U.S. issuers, delivering a 3.1% gain in the quarter and 13.2% year-to-date, the best return in 10 years. High yield returned 1.3% in the third quarter; though performance bifurcation by quality continued in 2019 as the BB-rated cohort gained 2.0% while CCC-rated credits fell by nearly the same amount. Among securitized products, agency MBS realized a return of 1.4%, despite a weak August, outperforming Treasuries by a modest 6 bps on a duration-adjusted basis over the quarter. The sector has had a challenging year, as Fed balance sheet reduction, Treasury rate volatility, and changes to the TBA market have caused spreads to fluctuate. Non-agency MBS, in contrast, continued to provide steady though modest positive performance, buttressed by favorable supply/demand characteristics. In the commercial MBS (CMBS) space, non-agency CMBS led with a 2.0% return and 34 bps of excess return over duration-matched Treasuries, while higher quality agency CMBS trailed Treasuries by 6 bps. Finally, benign consumer fundamentals buoyed traditional ABS sectors, resulting in a modest positive return of 0.9% gain for the quarter.

## MetWest Ultra Short Bond Fund

### Performance

The MetWest Ultra Short Bond Fund – I Class (“Fund”) gained 0.75% (net of fees) in the third quarter of 2019, outperforming the ICE BofAML 1-Year U.S. Treasury Index by 19 bps. Duration positioning was shorter than the benchmark throughout the quarter, and had little impact on performance. However, near the end of the quarter with Treasury rates falling, duration was extended modestly to near neutral versus the Index. Relative returns benefitted from the allocation to short corporate credit, which led fixed income with an excess return vs. duration-matched Treasuries of over 30 bps. Holdings remained focused on non-cyclicals, autos, banks, and REITs all of which outpaced Treasuries during the quarter. Structured products also contributed, with marginal contributions from CMBS and legacy residential non-agency MBS as the sector edged steadily higher, supported by solid demand and attractive fundamentals.

### Outlook & Positioning

Following a prolonged, albeit not especially vigorous, expansion, TCW has increasingly viewed current conditions as late-cycle in character, with a slowing pace of growth a consequence. Given the decidedly tightening posture of the Fed between late 2016 and early 2019 – nine rate hikes and significant balance sheet reduction – it’s not surprising that activity would turn down somewhat, particularly with a flatter yield curve reducing the incentives for financial intermediaries to expand their lending books. Add in the uncertainty of trade policy and you have players in the real economy deferring capital investment (weakening business confidence) and production volume (falling ISM manufacturing), putting further downward pressure on potential growth. The investment management team continues to emphasize a cycle-aware philosophy to mitigate the effects of a more challenging downturn and remains positioned to expand the risk budget when long-term expected returns are more favorable.

Portfolio duration extended modestly into the back-up during the last several weeks in September, ending the quarter largely neutral versus the benchmark (from 0.35 years short at the start of the quarter). By way of sector positioning, the Fund maintains a defensive credit stance with minimal exposure to the more vulnerable (i.e., “breakable”) issuers and industries. Exposure emphasizes consumer non-cyclicals such as pharmaceuticals, healthcare, or food and beverage, as well as short autos, banking, and REITs, with an eye towards adding opportunistically across credit during bouts of volatility when prices look relatively more attractive. Outside of credit, senior parts of the structured products markets remain a haven from credit excesses while still generating incremental return, though we remain vigilant to pockets of looser underwriting standards, particularly in current vintage CMBS. Residential MBS also remains an area to pick up relatively reliable yield, particularly in the legacy non-agency MBS space, which continues to present attractive risk-adjusted return potential despite a shrinking market, while the larger allocation to agency MBS is focused on floating rate CMOs given relatively stable duration profiles. Finally, the Fund focuses on super senior ABS backed by government guaranteed student loan collateral and agency-backed issues within CMBS.

TCW, its officers, directors, employees or clients may have positions in securities or investments mentioned in this publication, which positions may change at any time, without notice. This material may include estimates, projections and other “forward-looking” statements. Actual events may differ substantially from those presented. TCW assumes no duty to update any such statements. All projections and estimates are based on current asset prices and are subject to change.

### Investment Risks

It is important to note that the Fund is not guaranteed by the U.S. Government. Fixed income investments entail interest rate risk, the risk of issuer default, issuer credit risk, and price volatility risk. Funds investing in bonds can lose their value as interest rates rise and an investor can lose principal. Mortgage-backed and other asset-backed securities often involve risks that are different from or more acute than risks associated with other types of debt instruments. MBS related to floating rate loans may exhibit greater price volatility than a fixed rate obligation of similar credit quality. With respect to non-agency MBS, there are no direct or indirect government or agency guarantees of payments in pools created by non-governmental issuers. Non-agency MBS are also not subject to the same underwriting requirements for the underlying mortgages that are applicable to those mortgage-related securities that have a government or government-sponsored entity guarantee. For a complete list of Fund risks, please see the Prospectus.

### Glossary of Terms

**Agency CMBS** – The Agency CMBS market includes various mortgage-backed securities where the underlying assets are commercial real estate, predominantly multifamily properties. They have either an explicit US government guarantee or are guaranteed by one of the Government Sponsored Enterprises. **Agency MBS** – The purchase of mortgage-backed securities issued by government-sponsored enterprises such as Ginnie Mae, Fannie Mae or Freddie Mac. **Bloomberg Barclays U.S. Aggregate Bond Index** – A market capitalization-weighted index of investment-grade, fixed-rate debt issues, including government, corporate, asset-backed and mortgage-backed securities, with maturities of at least one year. **BPS (Basis Points)** – A unit that is equal to 1/100th of 1%, and is used to denote the change in a financial instrument. The basis point is commonly used for calculating changes in interest rates, equity indexes and the yield of a fixed-income security. **Collateralized Mortgage Obligation (CMO)** – A type of mortgage-backed security in which principal repayments are organized according to their maturities and into different classes based on risk. **Corporate** – Of or relating to a bond issued by a corporation as opposed to a bond issued by the U.S. Treasury, a non-U.S. government or a municipality. **CMBS (Commercial Mortgage-Backed Securities)** – A debt obligation that represents claims to the cash flows from pools of mortgage loans on commercial property. **Contraction** – A phase of the business cycle in which the economy as a whole is in decline. More specifically, contraction occurs after the business cycle peaks, but before it becomes a trough. According to most economists, a contraction is said to occur when a country’s real GDP has declined for two or more consecutive quarters. **Corporate Credit** – A term that is used in written investment materials and commentaries to refer to a corporation’s debt or to the corporate debt market as a whole. **Credit** – Issuers. **Cyclical** – A cyclical stock is a stock highly correlated to changes in the economy. **Defensive** – Stock that provides a constant dividend and stable earnings regardless of the state of the overall stock market. **Distribution** – Distributions of income and capital gains that mutual funds make to their investors periodically during a calendar year. **Dove/Dovish** – An economic policy advisor who promotes monetary policies that involve the maintenance of low interest rates, believing that inflation and its negative effects will have a minimal impact on society. Statements that suggest that inflation will have a minimal impact are called “dovish.” **Duration** – A measure of the sensitivity of the price (the value of principal) of a fixed-income investment to a change in interest rates. Duration is expressed as a number of years. Rising interest rates mean falling bond prices, while declining interest rates mean rising bond prices. **Dividend** – A distribution of a portion of a company’s earnings, decided by the board of directors, to a class of its shareholders. **Federal Reserve (the Fed)** – The central bank of the United States which regulates the U.S. monetary and financial system. **Floating Rate** – Any interest rate that changes on a periodic basis. The change is usually tied to movement of an outside indicator, such as the prime interest rate. **FOMC (Federal Open Market Committee)** – The branch of the Federal Reserve Board that determines the direction of monetary policy. **Fundamental** – Macroeconomics and Microeconomics. Macroeconomic fundamentals include topics that affect an economy at large. **High Yield** – A bond that is rated below investment grade. **ICE BofAML U.S. High Yield Index (HOA0)** – Tracks the performance of short-term U.S. dollar denominated below investment grade corporate debt publicly issued in the U.S. domestic market. **Investment Grade** – A bond that is rated Baa3/BBB- or higher by Moody’s, Standard & Poors and Fitch. **ISM (Institute For Supply Management)** – A non-profit organization that serves professionals, who are employed in the supply management profession. **Liquidity** – The ability to convert an asset to cash quickly. **MBS (Mortgage-Backed Securities)** – A type of asset-backed security that is secured by a mortgage or collection of mortgages. These securities must also be grouped in one of the top two ratings as determined by a accredited credit rating agency, and usually pay periodic payments that are similar to coupon payments. Furthermore, the mortgage must have originated from a regulated and authorized financial institution. **Non-Agency CMBS** – Commercial Mortgage Backed Securities whose underlying assets are commercial real estate such as multi-family, hotel, office, or retail properties and do not have an explicit US government guarantee nor are they guaranteed by one of the Government Sponsored Enterprises. **Non-Agency MBS** – Mortgage backed securities sponsored by private companies other than government sponsored enterprises such as Fannie Mae or Freddie Mac. **PCE (Personal Consumption Expenditure)** – The primary measure of consumer spending on goods and services in the U.S. economy. **PMI (Purchasing Managers Index)** – An indicator of the economic health of the manufacturing sector. The PMI index is based on five major indicators: new orders, inventory levels, production, supplier deliveries and the employment environment. **S&P 500 Index (SPX)** – A capitalization-weighted index of 500 stocks designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries. **Securitized Product** – Any fixed income investment from the mortgage-backed, asset-backed, or commercial mortgage-backed sectors. **Spread** – The difference between the bid and the ask price of a security or asset. **TBA (To Be Announced)** – A term used to describe a mortgage-backed securities trade. **Underwriting** – The process by which investment bankers raise investment capital from investors on behalf of corporations and governments that are issuing securities (both equity and debt). **U.S. Treasuries** – U.S. dollar denominated debt issued by the U.S. government. **Treasury bill (T-Bill)** – A short-term debt obligation backed by the Treasury Dept. of the U.S. government with a maturity of less than one year, sold in denominations of \$1,000 up to a maximum purchase of \$5 million. **Volatility** – A measure of the risk of price moves for a security calculated from the standard deviation of day to day logarithmic historical price changes. **Yield** – The income return on an investment. This refers to the interest or dividends received from a security and is usually expressed annually as a percentage based on the investment’s cost, its current market value or its face value. **Yield Curve** – A line that plots the interest rates, at a set point in time, of bonds having equal credit quality, but differing maturity dates. The most frequently reported yield curve compares the three-month, two-year, five-year and 30-year U.S. Treasury debt. This yield curve is used as a benchmark for other debt in the market, such as mortgage rates or bank lending rates. The curve is also used to predict changes in economic output and growth.
